

Dear Business Partners and Friends,

I really like to be out on the market, with you, with our partners, and try to get out whenever I can. It's an opportunity for me to learn and understand a lot about your "real" requirements – and it enables us as a company to realise far more clearly what we can offer you as added value or what we simply have to do better.

I often return from my travels full of ideas for new products, for constructive or functional improvements, for services and solutions that increase your efficiency and solve a problem that you may have. But just as often I return and ask myself: "Why do you make life so difficult for yourself?" I see oversized coolant systems, cooling units the size of a triple gullwing refrigerator, pressure booster solutions that don't hold the pressure, and much more besides. And all from different manufacturers.

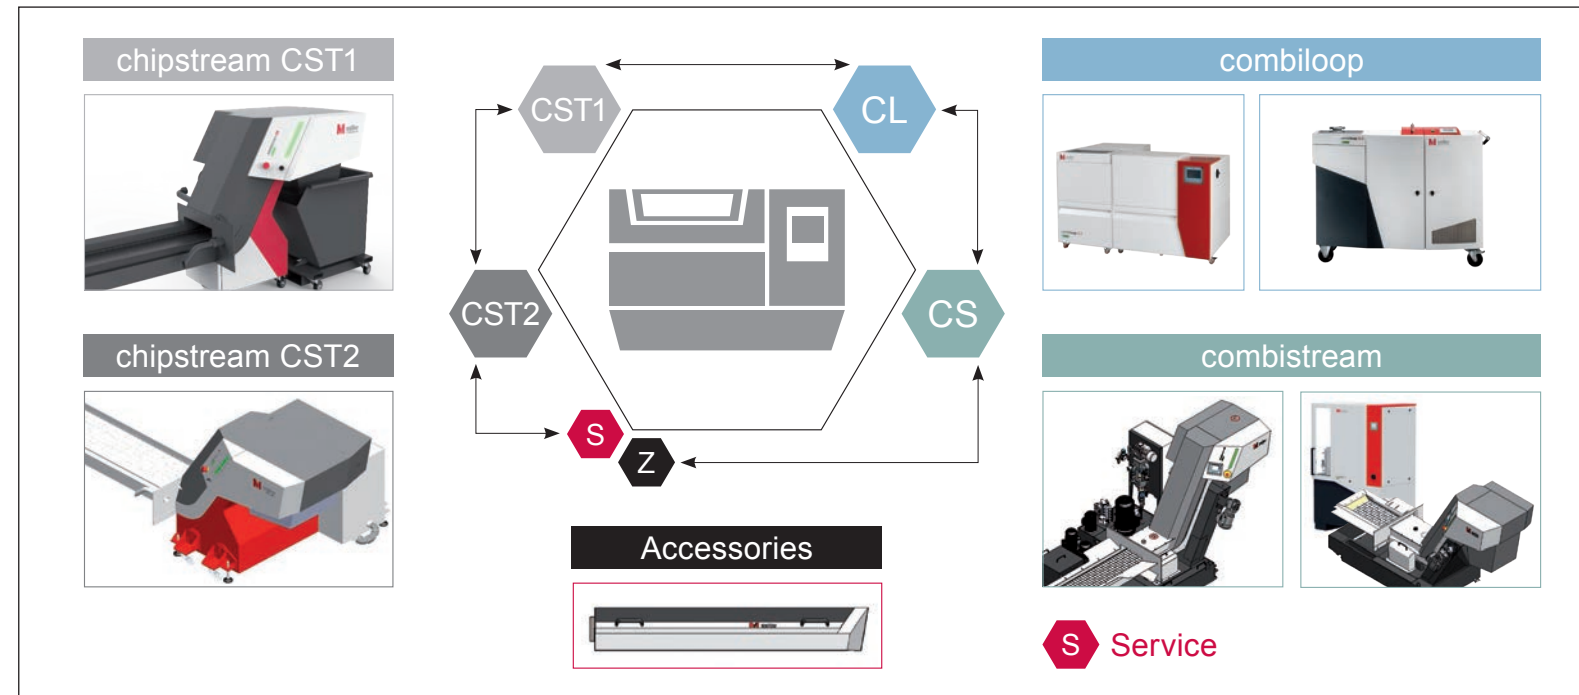

Strictly between ourselves, the question shouldn't really be, "Why do you make life so difficult for yourself?", but "Why don't we just make life as easy as possible for you?" And this is what made us realise what it is that makes us as Müller strong, and above all what you can benefit from today and in the future. We offer you everything from a single source – maximum combinability and, thanks to our clever modular system, maximum individualisation and optimum adaptability to your requirements and processes.

The rule is: to make your machining life as easy as possible in the future, and with that to increase efficiency. And this will shape both our development of new products and the targeted creation of new services. Discover Müller's maximum combinability, experience our news and additions in 2021.

Have fun – and we look forward to seeing you!
Yours, Martin Müller

ADDED VALUE – MAXIMUM COMBINABILITY – SIMPLY BENEFIT EFFICIENTLY

We ask ourselves: Why make your machining operations so difficult? From now on, you can benefit from real, system-based smoothness – with a unique variety of products for your machine tool periphery that can be combined and customised to the maximum.

The Müller paradigm is a real problem-solver and inefficiency-killer. Common practice is to equip a machine with various products by different manufacturers; complexity and loss of time promote inefficiency right down the line. However, maximum combinability allows you to benefit from countless solutions that simultaneously promote manufacturing efficiency and process reliability to the greatest possible extent. From a system with entry-level products such as a combiloop CL1 E, to solutions for high-pressure machining on sliding headstock lathes with a combiloop CL3 E, to absolute high-end solutions for maximum automation such as a combistream CS4 with a working chamber conveyor and tank bottom cleaning combined with a combiloop CL4 as a clean tank for high pure media availability.

Richard Huber, head of Müller Sales, summarises: "We offer a unique variety – in terms of price and modular equipment, but also with regard to set-up situations. In terms of high pressure, you can either choose a classic supplied product or a solution for tight installation situations under the bar feeder. The same applies to our chipstream and combistream products – from simple chip conveyors to fully integrated complete systems. A wide range of variants, a modular kit, maximum combinability plus the system partnership with leading machine tool manufacturers – all these offer unique added value and reflect our customer focus".

MÜLLER – YOUR COMMON THREAD FOR THE MACHINE TOOL!

COMBINE MAXIMUM SIMPLICITY WITH MAXIMUM EFFICIENCY: THE OVERRIDING ADDED VALUES ARE OBVIOUS:

- // No peripheral patchwork
- // One contact partner
- // Fast cross-partner service
- // Everything matching from a single source

- // Market-leading technologies
- // Synergies in training, operation, etc.
- // Safety thanks to standards
- // System partnership with the machine tool industry

MAXIMUM COMBINABILITY – OUR APPROACH, YOUR PROFIT:

A perfect match with the machine and production process:

- + Greater efficiency, more profit
- + Process reliability
- + Optimum operation
- + Resource conservation
- + Time saving, less stress

One partner for your cooling lubricant periphery – the right solution for you:

- + Effectiveness, safety, convenience
- + Time saving, less stress
- + Synergies

Predefined modular system components:

- + Uncomplicated connection
- + Speedy commissioning
- + Efficient operation

Standardisation in controllers and technologies:

- + Simple familiarisation
- + Safe operation
- + More efficient qualification

And much more.

ANY NEWS AT MÜLLER? – THERE CERTAINLY IS!

With a lot of work and high investments, Müller has continued to strategically expand its portfolio in 2021 in order to offer anything and everything that is relevant to unbeatably customisable and combinable products from a single source. From medium-pressure boosters for lathes to the highest-quality chip conveyors and new entry-level coolant fluid compact systems to the first closed high-pressure system for large machining centres, Müller News 2021 is not just trailblazing in terms of form and function.

- 1 combiloop CL1 B – the constant medium pressure producer
- 2 chipstream CST1 – chip conveyor benchmark made in Germany
- 3 Part of the chipstream anti-chip coalition: chip rake and scraper on the release
- 4 combiloop CL1 G – entry-level solution all wrapped up
- 5 combiloop CL6 G – coolant revolution for high flushing capacities

"Want to see some customer examples or an animation of the maximum combinability? You've come to the right place!"
